33 of 34 review helpful Beginners Guide to Parallel Programming on Clusters By Rajkumar Buyya Clusters of Computers have become an appealing platform for cost effective parallel computing and more particularly so for teaching parallel processing At Monash University School of Computer Science and Software Engineering I am teaching CSC433 Parallel Systems subject for BSc Honours students The course covers various co This accessible text covers the techniques of parallel programming in a practical manner that enables readers to write and evaluate their parallel programs Supported by the National Science Foundation and exhaustively class tested it is the first text of its kind that does not require access to a special multiprocessor system concentrating instead on parallel programs that can be executed on networked computers using freely available parallel software too From the Inside Flap Preface The purpose of this text is to introduce parallel programming techniques Parallel program ming uses multiple computers or computers with multiple internal processors to solve a problem at a greater computational speed than usin
