Research and development on optical wavelength division multiplexing WDM networks have matured considerably. While optics and electronics should be used appropriately for transmission and switching hardware, note that intelligence in any network comes from software for network control, management, signaling, traffic engineering, network planning, etc. The role of software in creating powerful network architectures for optical WDM networks is emphasized. From the reviews, the book would serve as a good reference for researchers in the area as it is well researched and provides a good starting point for many topics in optical networks. The author includes numerous citations throughout the book. [hellip](#)
