processing in the cloud springerbriefs in computer science doi 101007978 1 4471 2137 41 Video Processing in the Cloud (SpringerBriefs in Computer Science):

0 of 0 review helpful A good idea but horrible writeup By Austin While this book if you can call it that brings some interesting ideas for a video processing design to the table its writeup is horrible The entire book is filled with very poorly written english including grammar sentence structure and spelling Nonetheless it is still readable and brings a good academic point I just wouldn t say it As computer systems evolve the volume of data to be processed increases significantly either as a consequence of the expanding amount of available information or due to the possibility of performing highly complex operations that were not feasible in the past Nevertheless tasks that depend on the manipulation of large amounts of information are still performed at large computational cost i e either the processing time will be large or they will require intensive From the Back Cover No back cover text for Briefs
