The de facto standard for wireless networking is the 802 11 protocol which includes Wi Fi mdash the wireless

standard based on 802.11b, 802.11g and 802.11n protocols. With easy-to-install 802.11 network hardware available everywhere, you turn the choice seems simple and many people dive into wireless computing with less thought and planning than they should give to a wired network. But it's wise to be familiar with both the capabilities and risks associated. About the Author: Matthew Gast is the director of product management at Aerohive Networks, responsible for the software that powers Aerohive's networking devices. He has been active within the Wi-Fi community, serving as the chair of both security task groups.
