From Springer : Cloud Computing for Data-Intensive Applications cloud computing requires a complex networking subsystem in order to offer on demand access to a pool of computing resources communication among 18022014nbsp;building data intensive applications in emerging cloud computing environments is fundamentally different and more exciting the levels of scale Cloud Computing for Data-Intensive Applications:

This book presents a range of cloud computing platforms for data intensive scientific applications It covers systems that deliver infrastructure as a service including HPC as a service virtual networks as a service scalable and reliable storage algorithms that manage vast cloud resources and applications runtime and programming models that enable pragmatic programming and implementation toolkits for eScience applications Many scientific applications in clouds are
