This book offers a rigorous analysis of the achievements in the field of traffic control in large networks oriented on two main aspects the self similarity in traffic behaviour and the scale free characteristic of a complex network Additionally the authors propose a new insight in understanding the inner nature of things and the cause and effect based on the identification of relationships and behaviours within a model which is based on the study of the influenc About the Author Radu Dobrescu was born in 1946 He received his Dipl Eng degree in Automatic Control from the Faculty of Control and Computers of the Polytechnical Institute of Bucharest in 1968 In 1976 he received his Ph D degree in Autom
