and Design):

As the demand for digital communication networks has increased so have the challenges in network component design. To meet ever escalating performance flexibility and economy requirements the networking industry has opted to build products around network processors. These new chips range from task specific processors such as classification and encryption engines to more general purpose packet or communications processors. Programmable yet application specific. Highly recommended for practitioner and researcher alike. Network Processor Design introduces an important group of commercial and proprietary network processors and covers the latest thinking in the design and use of this important new class of applicati
