1 of 1 review helpful Thanks for leaving us hanging cisco By dave82 I love how cisco launched a new curriculum which makes old books obsolete and launches this teaching system and doesn't even bother to have a companion guide ready in time for the course making this course booklet the only option at the time While it provides all the text what it

doesn't offer is an index any illustrations or anything highlighting impor The Introduction to Networks Course Booklet offers a way for students enrolled in a Cisco Networking Academy introduction to Networks course to easily read highlight and review on the go wherever the Internet is not available The text is extracted directly from the online course with headings that have exact page correlations to the online course An icon system directs the reader to the online course to take full advantage of the image
