By Michael J. Neely : Stochastic Network Optimization with Application to Communication and Queueing Systems (Synthesis Lectures on Communication Networks) stochastic network optimization with application to communication and queueing systems michael j neely university of southern california synthesis lectures on stochastic network optimization with application to communication and queueing systems synthesis lectures on communication networks this text presents a modern Stochastic Network Optimization with Application to Communication and

Queueing Systems (Synthesis Lectures on Communication Networks):

This text presents a modern theory of analysis control and optimization for dynamic networks Mathematical techniques of Lyapunov drift and Lyapunov optimization are developed and shown to enable constrained optimization of time averages in general stochastic systems The focus is on communication and queueing systems including wireless networks with time varying channels mobility and randomly arriving traffic A simple drift plus penalty framework is used to optimi
