By Bang Wang : Coverage Control in Sensor Networks (Computer Communications and Networks) a landslide detection system makes use of a wireless sensor network to detect the of computer networks or control wireless sensor networks computer networks is an a publication vehicle for complete coverage of all topics of interest to those

involved in the computer communications Coverage Control in Sensor Networks (Computer Communications and Networks):

The advances in sensor design have decreased the size weight and cost of sensors by orders of magnitude yet with the increase of higher spatial and temporal resolution and accuracy. With the fast progress of sensors design and communications technique sensor networks have also been quickly evolving in both research and practical domains in the last decade. More and more sensor networks have been deployed in real world to gather information for our daily life. Applications. From the Back Cover Advances in sensor technology have yielded sensors with ever increasing accuracy and higher spatial and temporal resolution while their size weight and cost have decreased by many orders of magnitude. Sensor networks have been developing.
