16 of 16 review helpful Concise but explanatory By Shadman Zafar This is one of the best written books on NN This book has that rare quality of being succinct but clearly written so that it can be understood by reasonably mathematical minded individual It covers most of the basic topics back propagation feed forward Hopfield nets etc and gives idiosyncrasies of the field It also gives you a simple but accu Though mathematical ideas underpin the study of neural networks the author presents the fundamentals without the full mathematical apparatus All aspects of the field are tackled including artificial neurons as models of their real counterparts the geometry of network action in pattern space gradient descent methods including back propagation associative memory and Hopfield nets and self organization and feature maps The traditionally difficult topic of adaptive About the Author Gurney K University of Sheffield UK
