generally hope is that this report may help you get to know and enjoy this amazing new parallel graph complexity and parallel computing communication or Communication Complexity and Parallel Computing:

The communication complexity of two party protocols is an only 15 years old complexity measure but it is already considered to be one of the fundamental complexity measures of recent complexity theory Similarly to Kolmogorov complexity in the theory of sequential computations communication complexity is used as a method for the study of the complexity of concrete computing problems in parallel information processing Especially it is applied to prove lower bounds Together students and researchers interested in the field of complexity theory get an informative compendium at their disposal Formulations are precise and the proofs are exact and complete the book should be contained in the library of every complexity
