Applications on Cloud Computing:

Power infrastructures are increasingly becoming data driven with the proliferation of consumer devices communicating with the service providers. While there are tremendous advantages enabled by the aggregation and analysis of this data, the increasing granularity and personal nature of the data imply that smart grid application platforms deployed in the cloud inherit the security and privacy challenges of huge Data Cloud computing. Cloud computing is emerging in recent years and is still about the Author Hassen obtained bachelor degree from International Islamic University Malaysia IIUM.
