Cryptography is a fascinating domain and a branch at the crossroads of several sciences Through the decades its techniques and objectives have evolved into many different complex structures but its core has not changed In order to hide any data a suitable cryptographic mechanism and an appropriate random number key are needed As most of the security models need to transmit the key separately before the encryption process key management is still a problem to be s About the Author Dr Rubesh Anand is a Professor in Electronics and Communication Engineering at Hindustan University India His research interests include image processing communication networks biometric security cryptography and network security He has p
