Cloud Computing is a new paradigm where resources are used as on demand utility Infrastructure as a Service IaaS cloud uses virtual machine VM based implementation for numerous advantages like elasticity fault isolation efficient hardware utilization security and ease of management Virtual machine monitor VMM like Xen is a popular virtualization software to manage virtual machines by scheduling them to use resources such as CPU memory and network Performance is About the Author Gaurav Somani M Tech BE is a faculty member at Department of CSE in LNMIIT Jaipur India His areas of interests include distributed computing computer networks cloud computing and virtualization His work has been published in reputed inte
