By Abhay Bhadani : Cloud Computing and Virtualization: Issues of Computational Resource Allocation and Load Balancing in Cloud Computing using Virtualization efficient resource provisioning using virtualization technology in cloud computing resource allocation are utilized properly by balancing the load load balancing in cloud computing provides an efficient solution to various issues residing in cloud computing class diagram of cloud 21 resource allocation Cloud Computing and Virtualization: Issues of Computational Resource Allocation and Load Balancing in Cloud Computing using Virtualization:

This book gives an overview of Cloud Computing and Virtualization It discusses the issues in Computational Resource Allocation and does an extensive experiments to evaluate the performance of web servers hosted on virtual operating systems As multiple operating systems run on a single physical server and multiple servers are running in the data center all connected via high speed network links at some point of time one of the servers may be overloaded while others About the Author Abhay Bhadani is a Doctoral Student at IIT Delhi He did M Tech in ICT at DA IICT India as well as Masters and Bachelors in Computer Application He also worked as Research Fellow at National Informatics Center New Delhi His interests are
