Currently cloud computing environments have come up with a serious problem known as security which is in terms of Confidentiality of Data Integrity of the Message and Authenticity of the users CIA Since user s personal data is being stored in an unencrypted format on a remote machine operated by third party vendors who provide various services the impact of user s identity and unauthorized access or disclosure of files are very high Though we have various technique About the Author Ashwin Dhivakar M R Currently a Research Fellow in the Department of Computer and System Sciences at Jaipur National University Rajasthan India He has authored few papers with IEEE publications and other International Journals as well on Gri
