(World Scientific Series in Computer Science):

Parallel implementation of algorithms involves many difficult problems In particular among them are round off
analysis the way to convert sequential programs and algorithms into the parallel mode the choice of appropriate or
optimal computer architect and so on To solve these problems it is necessary to know very well the structure of
algorithms This book deal with the mathematical mechanism that permits us to investigate structures of both
sequential and parallel The book contains a number of exercises helping the reader to master the material of interest to
researchers in the area of the theory of parallel computing L S Brim
