7 of 7 review helpful Taming the paperfull office By A Customer I found Network Printing to be a fine example of taking documentation from at least half a dozen sources and tying it all together with a coherent theme providing

network print services to customers using fill in the blank systems Six years ago when I was managing four Unix systems for 100 customers who wanted to print their reports on any of a dozen On today s networks it s common to have users running Windows Apple Novell and many versions of Unix Each operating system has its own printing facility and there is little or nothing in common between them there is no single system for print spooling Yet all users want to be able to print and most of the time they have to share the same printers The network administrator has to solve this problem as efficiently as possible O Reilly s Netw com Paperless office paperless schmoffice if you can t get your document to look right on paper you might as well not waste time creating it at all For administrators printing across a local area network LAN was hard enough when everyone was running th
